Nguyễn Quốc Hùng

Front-End Developer

📞 0974168187 | ✉️ quochung13122002@gmail.com | 🔗 Portfolio | 📍 Quận Hai Bà Trưng, Hà Nội

🎯 Career Objective

Short-term: Enhance my knowledge, gain real-world experience, and develop specialized skills to become a professional Front-End Developer.

Long-term: Improve both technical and soft skills to become a valuable team player and expert in the field over the next 5 years.

🎓 Education

Field	Detail
University	University of Transport and Communications
Faculty	Faculty of Information Technology
Duration	2020 – 2025
Classification	Good

🛠️ Skills

Category	Details
Languages & Frameworks	React.js, Next.js, React Native, CSS, Tailwind CSS, Solidity, Python
Tools & Technologies	Redux Toolkit, Git, RESTful API
English	Pre-intermediate

👩‍💻 Work Experience

Lifestyle Vietnam | Marketing Developer

04/2026 – Present

- Built and maintained an automated social media pipeline using **n8n** and a custom **TypeScript monorepo** (Node.js, Express, Prisma).
- Automated end-to-end content workflows: topic ingestion from **Google Sheets** → AI caption generation (Ollama, Gemini) → image rendering (Stable Diffusion, Gemini Image API) → auto-publishing to **Facebook** and **TikTok**.
- Designed a custom **Workflow Engine** with fault tolerance: step-by-step execution logging, auto-retry with exponential backoff, and resume-from-last-step capability.
- Integrated multiple AI and social media APIs: **Google Gemini**, **Ollama** (local LLM), **Replicate**, **Runway ML**, **OpenAI Vision**, **Facebook Graph API**, **TikTok API**.

Lifestyle Vietnam | Game Developer Intern

02/2026 – 04/2026

- Developed educational mini-games for children (ages 3–6) using **Phaser 3** and **Vite + TypeScript**, covering mechanics such as lasso selection, drag-to-match, trace & paint letters, and voice-based pronunciation scoring.
- Integrated games with the **Iruka Edu SDK** to handle game lifecycle, session tracking, and score reporting.
- Built **automation scripts** (Node.js) to mass-patch SDK compliance across 13+ game projects simultaneously, significantly reducing manual effort.
- Implemented **voice-based learning features**: microphone recording, audio submission to backend APIs, and real-time pronunciation scoring.

3i Company | Front-End Developer

02/2025 – 09/2025

- Developed UI modules using **Next.js** and **Angular** for internal product and customer management platforms.
- Integrated front-end with **.NET** backend, ensuring synchronized and secure data flow.
- Built landing pages, dashboards, and interactive charts using **Recharts** and **Chart.js**.

- Optimized rendering performance with **SSR**, lazy loading, and caching techniques.
- Handled client-side authentication, authorization, and UI role management.
- Participated in **Agile/Scrum** workflows with Git and Docker in a CI/CD pipeline.

LANCS Networks | Front-End Developer Intern

05/2023 – 08/2023

- Developed UI with **ReactJS** and **Tailwind CSS** based on Figma designs.
- Built mobile application screens using **React Native** for internal use.
- Supported modules including data input forms, list views, and simple dashboards.
- Fixed UI/UX issues and improved usability based on QA feedback.
- Used **GitLab** for source control.

📦 Projects

🧠 Legal AI – Legal Information Synthesis System

> *A specialized AI system designed to synthesize Vietnamese legal information using Retrieval-Augmented Generation (RAG) and controlled legal reasoning. Provides real-time, evidence-based answers streamed via Server-Sent Events (SSE).*

Tech Stack

Layer	Technologies
Backend	Python, FastAPI, Uvicorn
AI / NLP	Sentence-Transformers (Multilingual MiniLM), Semantic Search, LLM via Ollama
Architecture	RAG, Legal rule ranking (Cosine Similarity), Anti-hallucination protocols
Real-time	Server-Sent Events (SSE)

Key Features

- **Controlled Legal Reasoning:** Generates insights strictly based on statutory provisions to ensure accuracy.
- **Structured Output:** Responses follow a standardized format — *Legal Conclusion* + *Legal*

Basis (laws, decrees, circulars).

- **Streaming Responses:** Real-time text generation for improved UX.

🤖 AutomaticSocialMedia – Social Media Automation Platform

> *A custom TypeScript monorepo platform that automates the full social media pipeline: generating captions with AI, rendering images/videos, and auto-publishing to Facebook & TikTok — replacing no-code tools like n8n.*

Tech Stack

Layer	Technologies
Backend	Node.js, Express, Prisma ORM, SQLite
Frontend	React, Vite, Tailwind CSS
AI / Integrations	Google Gemini, Ollama, Replicate (Stable Diffusion), Runway ML, OpenAI Vision
Social APIs	Facebook Graph API, TikTok API, Google Sheets
Architecture	pnpm Monorepo, Custom Workflow Engine

Key Features

- **Multi-Platform Workflows:** Automates the entire pipeline from topic extraction (Google Sheets) → AI media generation → publishing (Facebook, TikTok).
- **Custom Workflow Engine:** Built-in fault tolerance with auto-retry, resume from last successful step, and full execution history in DB.
- **Cost-Optimized AI:** Hybrid approach combining free local LLMs (Ollama) with premium APIs (Gemini, OpenAI) for optimal cost efficiency.
